

Collaborating partners	International Agency for Research on Cancer (IARC) Maternidade Lucrecia Paim (MLP)	 <p>The map shows the outline of Angola with a small circle indicating the location of Luanda on the west coast.</p>
Location	Luanda	
Purposes	To research on screening methods and on the “see, see, and treat” treatment approach. To initiate cervical cancer prevention services.	
Age Group	30-59 years	
Number of women studied/served	11,000	
Project study period	2002-2004 (screening services continue with local funds)	
Key study questions or service-delivery strategy	<ol style="list-style-type: none"> 1. To estimate the performance (sensitivity and specificity) of visual inspection with acetic acid (VIA) and visual inspection with Lugol's iodine (VILI) in detecting cervical intraepithelial neoplasia (CIN). 2. To evaluate the “see, see, and treat” approach in routine health care settings for feasibility, safety, acceptability, and the extent of over-treatment. 3. To organize screening services and train human resources in cervical cancer prevention. 	
Date results expected	Preliminary results: December 2006 Final results: by July 2007
