

<b>Collaborating partners</b>	International Agency for Research on Cancer (IARC) Chittaranjan National Cancer Institute Saktipada Das Memorial Foundation
<b>Service base</b>	Field clinics, clinics in local primary health centers/hospitals, mobile clinics, hospitals.
<b>Location</b>	Calcutta city and suburban region
<b>Purpose</b>	To research on screening methods and on the “see, see, treat” treatment approach.
<b>Age group</b>	30-64 years
<b>Number of women studied/served</b>	22,834
<b>Project study period</b>	1999-2006 (screening services continue with local funds.)
<b>Key study questions or service-delivery strategy</b>	<ol style="list-style-type: none"> <li>1. To estimate the performance of HPV testing, visual inspection with acetic acid (VIA), magnified VIA (VIAM), and visual inspection with Lugol's iodine (VILI) in detecting cervical intraepithelial neoplasia (CIN).</li> <li>2. To evaluate “see, see, treat” in routine health care settings for feasibility, safety, acceptability, and the extent of over-treatment.</li> <li>3. To evaluate the test characteristics of VILI, followed by naked eye VIA and VIAM in detecting CIN.</li> <li>4. To evaluate the comparative efficacy of single- versus double-freeze cryotherapy in the treatment of ectocervical CIN lesions.</li> </ol>
<b>Date results expected</b>	Preliminary results: June 2003 Final results: July 2004
